Powering our commercial customers

Commercial

We power your business

From offices to apartment buildings, we work with clients to understand their electrical needs at every stage of a project.

Whether it's the supply of transformers, cables and switchboards or lighting, power points and switches, we can oversee the design, procurement and supply of all electrical systems.

Using our knowledge and access to a huge range of suppliers, we provide an ideal solution that's cost-effective and complies with your specification.

What we do

Since 2016, PPI has delivered customised electrical solutions to commercial customers spread throughout Australia and Asia Pacific.

We offer a broad range of services, including:

LIGHTNING PROTECTION DESIGN

We perform lightning protection audits on a range of applications, each of which takes into consideration AS/NZS1768 and IEC 62305-2., and can attend sites to understand the particular application required to protect the building.

ELECTRICAL RETICULATION DESIGN

Our team provides full electrical reticulation engineering and design in accordance with the Australian Standard. Using state-of-the-art software, we design using products that are innovative whilst maintaining a cost effective solution.

POWER QUALITY AUDIT

Power quality audits help prevent unusual issues within our customer's electrical system, and we provide both analysis and solutions to protect from dangerous harmonics, power system disturbances and increased energy costs.

LIGHTING DESIGN

Our engineering team can provide a full lighting design for a building – delivering a cost-effective solution in terms of both capital outlay, and maintenance and performance cost.

Our procurement pillars

When procuring products for our customers, we prioritise three considerations.

01

SPECIFICATION

Is our client currently using old technology instead of an innovative solution that could provide a cost-effective alternative?

02

CONDITIONS

Will the procured product sustain the challenging environmental conditions in which it needs to be installed – and if not, how can we provide a solution that minimises impact and enhances performance?

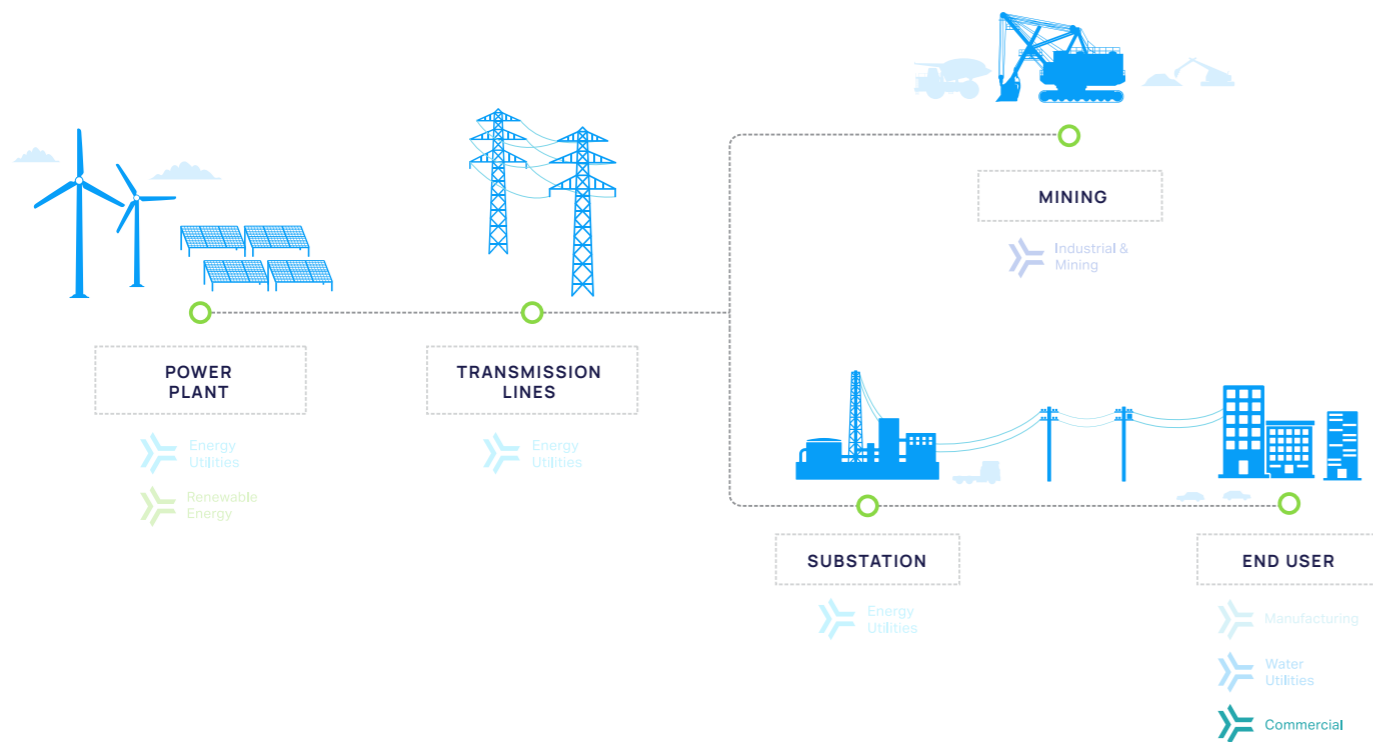

03

TRAINING

Does our client know how to use this product correctly, or should we engage the manufacturer to provide expert product training and support?

Powered from beginning to end

From power generation right through to the ultimate end-user, PPI provides comprehensive solutions to industries at every stage of the power process.

Some of the many major projects we've worked on include

- > OPH 2 Apartments, Port Moresby Papua New Guinea
- > Brian Bell Home Centre, Port Moresby Papua New Guinea
- > Lava Hotel, Apia Samoa
- > Pacific Climate Change Centre, Apia Samoa
- > Momi Bay Resort, Momi Bay Fiji
- > Sir Herbert Murray Stadium, Port Moresby Papua New Guinea
- > Six Senses Resort, Vunabaka Island Fiji
- > Nadi Retail Plaza, Nadi Fiji

Our products

Embracing new technologies, PPI prioritises the development of a network of global – and often exclusive – manufacturer relationships, resulting in the consistent and reliable procurement of high-quality materials.

Our office in Jiangsu Province, China, leaves us well-positioned to easily procure components and materials throughout Asia Pacific – meaning we can supply clients with the highest quality materials at the lowest possible price.

PRODUCTS

- > Lightning and surge protection
- > Cables and conduit
- > Switchboards – custom build
- > Lighting
- > Cable tray
- > Transformers
- > Power factor correction
- > Voltage regulators
- > UPS
- > Security and CCTV solutions

Contact us

At PPI we pride ourselves on providing a professional and personal service – building long-lasting relationships with our clients. To find out how we can deliver the best possible solution to your water utilities company, get in touch today.
